

RONIT KR ROY

Software Engineer in Test (SDET) · Test Automation · Quality Engineering · Endpoint Security

Newtown, Kolkata – 700135, India +91 88251 77143 ✉ ronitofficial99@gmail.com
[linkedin.com/in/ronit-kumar-roy-a1b519](https://www.linkedin.com/in/ronit-kumar-roy-a1b519)

PROFESSIONAL SUMMARY

Self-starting Software Engineer in Test with 3.5+ years of experience building automation frameworks, executing end-to-end quality engineering, and solving complex validation challenges at enterprise scale. Proven track record designing shell-scripted and Selenium-based test suites, performing root-cause defect analysis, and collaborating across engineering teams to improve product quality and release velocity. Experienced in acting as a Designated Responsible Individual (DRI) for QA operations — monitoring system health, alerting stakeholders on degradation, and driving resolution for both simple and complex issues. Brings a passion for learning, automation-first thinking, and a high-impact mindset to every sprint.

TECHNICAL SKILLS

Languages	Java, Python, Shell Scripting (Bash / macOS), SQL, JavaScript (Basic)
Automation	Selenium WebDriver, TestNG, JUnit, Custom Shell Frameworks, Appium (Basic)
Testing Types	Functional, Integration, Regression, Performance, Scalability, Stress, UAT, E2E
API & Tools	Postman, REST API Validation, JSON/XML, JIRA, TestRail, Jenkins, Git, CI/CD
Analysis	Root-cause Analysis, Log Analysis, Bottleneck Identification, Latency Diagnostics
Cloud & Infra	AWS (EC2, VPC, NAT Gateway, Security Groups, IAM) · Microsoft Azure (Exposure)
Platforms	Windows 10/11, macOS Ventura/Sonoma, Web Applications, Enterprise Security Systems
Methodology	Agile, Scrum, SDLC, STLC, Defect Lifecycle Management, Sprint Planning

PROFESSIONAL EXPERIENCE

Software Engineer in Test & QA Lead | CBNITS India Pvt. Ltd. • KolkataOct 2025 – Present

Client: Palo Alto Networks — Cortex XDR Endpoint Security Platform

- Collaborated with Palo Alto Networks stakeholders to determine and refine user requirements and acceptance criteria for endpoint security agent features across Windows and macOS platforms.
- Analysed product requirements and authored comprehensive test plans, test cases, and traceability matrices covering installation, upgrade, downgrade, uninstall, OS permission changes, and background service behaviour.
- Designed, developed, and maintained reusable shell-scripted automation frameworks (Bash / macOS) for functional, integration, and end-to-end testing of AI-driven Cortex XDR security agents.
- Built tooling and harnesses for automated log validation, process verification, registry/plist checks, and system health monitoring to streamline test execution and results reporting.
- Automated multi-vendor security agent validation pipelines** for Trellix, McAfee, Sophos, and Symantec — enabling parallel, repeatable cross-product regression runs.
- Identified, tracked, and troubleshooted defects in JIRA; performed root-cause analysis in collaboration with engineering teams and proposed targeted fixes to improve product quality.
- Acted as Designated Responsible Individual (DRI) — monitored system health across agent deployments, alerted stakeholders on degradation or downtime, and initiated recovery actions for complex platform issues.
- Led QA team as Team Lead: task allocation, sprint planning, deliverable review, risk identification, and milestone reporting to management.

Software Engineer in Test | Raprocare Technology • KolkataApr 2025 – Sep 2025

- Analysed product requirements and designed end-to-end test plans for an enterprise B2B procurement platform covering purchase orders, vendor management, invoice approvals, and finance modules.
- Designed, developed, and maintained Selenium WebDriver + TestNG automation suites for functional and regression testing — improving repeatability and reducing manual regression cycles.
- Executed REST API validation using Postman: verified payloads, HTTP status codes, JWT authentication, and error-handling; performed SQL-driven backend data verification for end-to-end integrity.
- Performed root-cause analysis on defects, collaborated with engineering teams on resolution, and maintained structured test cases and defect logs with full requirements traceability in JIRA.

Associate Software Engineer in Test | PTS Consulting Services • Kolkata Aug 2023 – Mar 2025

- Collaborated with stakeholders to determine user requirements; authored detailed test plans, test cases, and defect reports for multiple enterprise web application projects.
- Executed functional, regression, integration, and cross-browser testing (Chrome, Firefox, Edge); validated UI workflows, business logic, and backend integrations.
- Identified defects, performed root-cause analysis with developers, tracked resolution to closure in JIRA/Bugzilla, and maintained regression suites each sprint to ensure quality delivery.

QA Intern | Travarsa Pvt. Ltd. • Kolkata Jun 2023 – Aug 2023

- Executed structured test cases for a travel and booking platform; logged detailed defect reports and performed regression validation after developer bug fixes.
- Assisted senior engineers with exploratory testing, test data preparation, and sprint test summary documentation.

KEY PROJECTS

► Palo Alto Networks — Cortex XDR Endpoint Security | Bash · Shell Scripting · Java · JIRA · Windows · macOS

Architected shell-based automation frameworks for full lifecycle validation of AI-driven endpoint security agents. Covered silent install, upgrades, downgrades, uninstall, log analysis, process monitoring, OS permission validation, and multi-vendor compatibility (Trellix, McAfee, Sophos, Symantec). Acted as DRI for QA operations and direct stakeholder communication.

► Raprocare — Enterprise B2B Procurement Portal | Selenium WebDriver · TestNG · Postman · SQL · JIRA

Designed and implemented Selenium + TestNG automation suites for a multi-module procurement platform. Validated all REST APIs for CRUD operations and auth flows, performed SQL backend verification, and executed cross-browser regression testing across Chrome, Firefox, and Edge.

► Yujj Employee Management System | Selenium · Postman · SQL · JIRA

End-to-end UI and API testing for an employee lifecycle platform. Validated RBAC enforcement, onboarding/offboarding workflows, and payroll accuracy. Designed Postman API collections for all endpoints and performed root-cause analysis on all critical defects.

EDUCATION

Master of Computer Applications — MCA (Information Technology)

2021 – 2023

Amity University, Kolkata

CGPA: 7.8 / 10 • Specialisation: Software Engineering & IT

Bachelor of Computer Applications — BCA (Information Technology)

2017 – 2020

BCET (Bengal College of Engineering & Technology), Durgapur

First Class • Specialisation: Information Technology

CERTIFICATIONS & PROFESSIONAL DEVELOPMENT

Certified Scrum Master
Scrum Alliance

Python & Selenium
Test Automation

Core Java
OOP & Design Patterns

Azure AZ-104
Microsoft — In Progress

ISTQB Foundation
Planned — 2026

AWS Fundamentals
EC2, VPC, IAM
